Experience Private AI: Unlock iManage, NetDocuments & SharePoint DMS insights within Microsoft 365 Copilot - with Klapper

Q & A

1. **Did KLapper get created in CoPilot Studio and if so, could we extend KLapper's data sources to our own custom data sources like DataVerse, SQL, etc?**

Answer: KLapper is a Private AI platform and ships with its own Agent Builder platform that deploys within your Azure tenant. Once you build agents with KLapper they can be deployed within 1-click deployment option to Teams, SharePoint, Copilot, Web apps, Websites, or even natively within Microsoft Word as add-in or within KLapper iOS, Android and Windows apps.

2. **Can it work with iManage on prem? And can it work with previous versions of documents in iManage - like do comparisons?**

Answer: KLapper is a Private AI platform and works with both iManage Work Server (version 10.4+) and iManage Cloud. KLapper can do comparisons of iManage documents.

3. **What is the value proposition of KLapper above and beyond using native copilot agents or agents built in copilot studio?**

Answer: KLapper is a Private AI platform that costs just \$10/user/month. You can use KLapper agent directly in Teams, SharePoint, Websites/apps, MS Word and much more without requiring additional licenses for Copilot or Power Automate premium licenses (required to connect to your Legal KM app APIs). KLapper ships with Premium Connectors to common Legal KM apps like NetDocs, iManage, SharePoint, SQL data, Fabric data, Microservices connector, and many other KM apps that allows you to simply point, click, configure and learn from those KM apps without any additional cost. Best of all KLapper ships with its own custom RAG that privately and securely lives within your Firm's Azure tenant and by design is security and ethical walls aware, which

means you can be assured that KLapper only serves data intelligence based on the user's access permissions in that Legal KM app.

4. Maybe you covered this at the beginning -- who uses Klapper Builder? An admin, or each end-user for him/herself?

Answer: KLapper Builder is a no-code Agent Builder platform used by Administrators, IT, KM&I staff members to create and train agents that can be then deployed in Teams, SharePoint, Copilot, Microsoft Word or natively within KLapper iOS, Android and Windows apps.

5. What is the cost to deploy KLapper?

Answer: KLapper is a Private AI platform that only costs just \$10/user/month and securely deploys within your firm's Azure tenant. There will be an Azure hosting cost of approximately \$500/month and depending on KLapper agent usage by your end users, the Azure consumption costs can vary per month.
